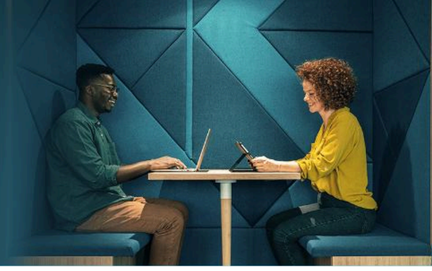
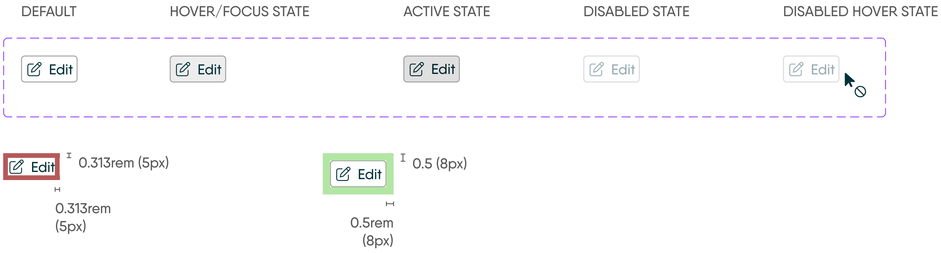
Action button



Actions buttons are used primarily within components such as the action bar or inline edit.

Default

Use a default action button to display actions within a component such as a action bar or inline edit field. A filter overlay of 85% brightness will be applied to the default states for the active state.

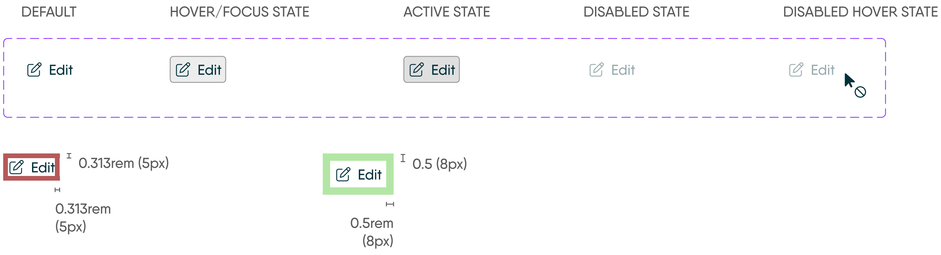


Emphasised

Use an emphasised action button to display the primary action within a component such as a action bar or inline edit field. Emphasised action buttons should only appear once per component. Not every component requires an emphasised action button. A filter overlay of 85% brightness will be applied to the default states for the active state.

Quiet

Use a quiet action button to display less important actions within a component such as a action bar or inline edit field. A filter overlay of 85% brightness will be applied to the default states for the active state.



Disabled button state

When any of the buttons above are disabled we should:
- Disable the normal hover state for that button
- Reduce the opacity of the button to 40%
- Add a native browser 'blocked' symbol when the user hovers over the button.

Version control:	Date of design update:	Notable updates:
V1 added	21.02.2025	• Split out into separate page • Added emphasised and quiet action buttons • Added option to have icon left and/or right of button label • Reduced minimum button external padding to 8px • Added disabled states to figma component
