Admin panel

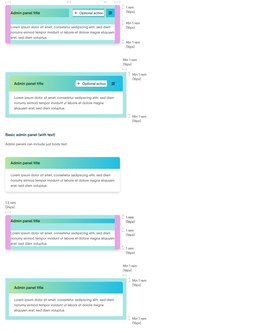
An admin panel can be used to group and separate content within an admin setting.

Basic admin panel

A basic admin panel includes a header and body. The header includes a title and can include compact (small), or active buttons (optional). The body is a slot component which can be switched to any component.

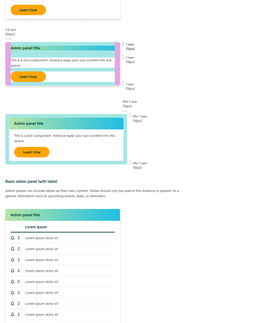
The panel will either apply a drop shadow with a default colour of rgb(0 #000000), 5px Y-axis and 15px blur with an opacity of 15% as default or a 2px outline with default colour of rgb(0 #000000).

We can use colour in the header to add interest across products. There are four colour variations light gradient, dark gradient, light and dark.



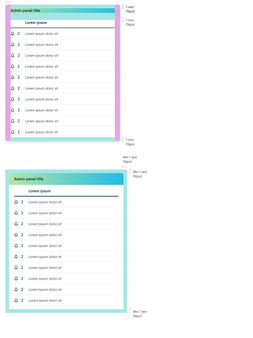
Basic admin panel (with text)

Admin panels can include just body text



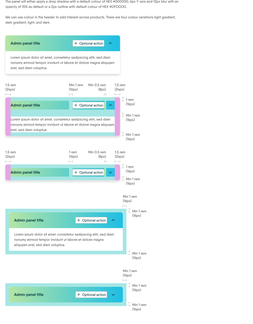
Basic admin panel (with CTA)

Admin panels can include a CTA to start a journey, perform an action or to navigate to a new page. Any button type can be used as the CTA. Use a minimum of 16px (1rem) padding around the button.



Basic admin panel (with table)

Admin panels can include tables as their main content. Tables should only be used in this instance to present 'at a glance' information such as upcoming events, tasks, or reminders

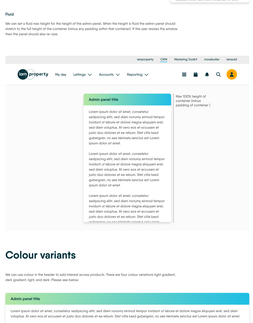


Collapsible admin panel

A collapsible admin panel is a variant of the basic admin panel. It allows the user to collapse the body content into the header to reduce the height of the panel and hide content. The user can collapse the panel using the compact (small) secondary button in the header. It is particularly useful in pages where panels have been used to separate steps and particular steps have been completed or if there are lots of admin panels on one page fighting for space.

The panel will either apply a drop shadow with a default colour of rgb(0 #000000), 5px Y-axis and 15px blur with an opacity of 15% as default or a 2px outline with default colour of rgb(0 #000000).

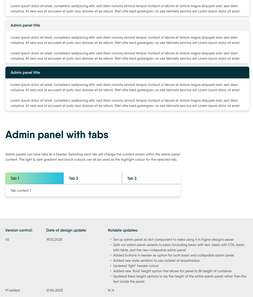
We can use colour in the header to add interest across products. There are four colour variations light gradient, dark gradient, light and dark.



Admin panel max height

Fixed

We can set a fixed max height for the height of the admin panel. There are three fixed heights. Small with a max height of 20rem (320px), Medium with a max height of 40rem (640px) and Large with a max height of 60rem (960px). A fade mask for the padding at the bottom line (text) should be added when the content is scrollable.



Fluid

We can set a fluid max height for the height of the admin panel. When the height is fluid the admin panel should stretch to the full height of the container (minus any padding within that container). If the user resizes the window then the panel should also re-size.

Colour variants

We can use colour in the header to add interest across products. There are four colour variations light gradient, dark gradient, light and dark. Please see below:

Admin panel with tabs

Admin panels can have tabs as a header. Selecting each tab will change the content shown within the admin panel accordion. The type 5 x-large gradient and block colours can all be used as the header height colour for the selected tab.

Version control:	Date of design update:	Notable updates:
V3	19.03.2025	• Set up admin panel as slot component to make using it in Figma designs easier • Split out admin panel variants to basic (including tables), with text, basic with CTA, basic with fields, and the new collapsible admin panel • Added new variants for admin panel with max height and collapsible admin panel • Added new style variation to use instead of drop shadows • Updated 'light' header colour • Updated the 'fade mask' gradient that allows for panel to fill height of container • Updated fixed heights to be the height of the entire admin panel rather than the text inside the panel
V1 added	01.04.2023	N/A
