Use a secondary split button to add related actions to a secondary action on a page. It can either be paired alongside a primary button on used on it's own to support a secondary actions for the user. A filter overlay of 85% brightness will be applied to the default states for the active state. The menu should open to the below and to the right by default but should change position depending on screen space available. The menu should be able to be dismissed by clicking anywhere outside the menu. HOVER/FOCUS STATE **ACTIVE STATE DEFAULT**

Use an icon to support a secondary split button (small). See example below where an arrow icon is used to

highlight that the button action is to reply. The icon can be added before or after the button copy. Whichever is

Disabled button state When any of the buttons above are disabled we should: - Disable the normal hover state for that button - Reduce the opacity of the button to 40% - Add a native browser 'blocked' symbol when the user hovers over the button.

Due to the small real estate of mobile screens and dialogs we can reduce the minimum padding around buttons from 24px (1.5rem) to 16px (1rem). This reduced padding provides more flexibility when designing for mobile as more content can be displayed on

Mobile and dialog button padding

taps. 1rem (16px) Reply

the screen at once. The minimum padding does however ensure that the screen doesn't become too cluttered

and that there is adequate spacing around the button to maintain a suitable touch target size to avoid accidental
