

# Insights

Created to be used in the Looker studio, the Insights component can be integrated into your applications or websites to enhance the user experience and provide valuable insights into property data.

Using the insights component, you can display and interact with property data in a structured manner. The intended use is to provide a clear and intuitive way to explore and manage property information.

The map data display is driven from the table data - if a filter is applied to the table, it also is applied to the map view.

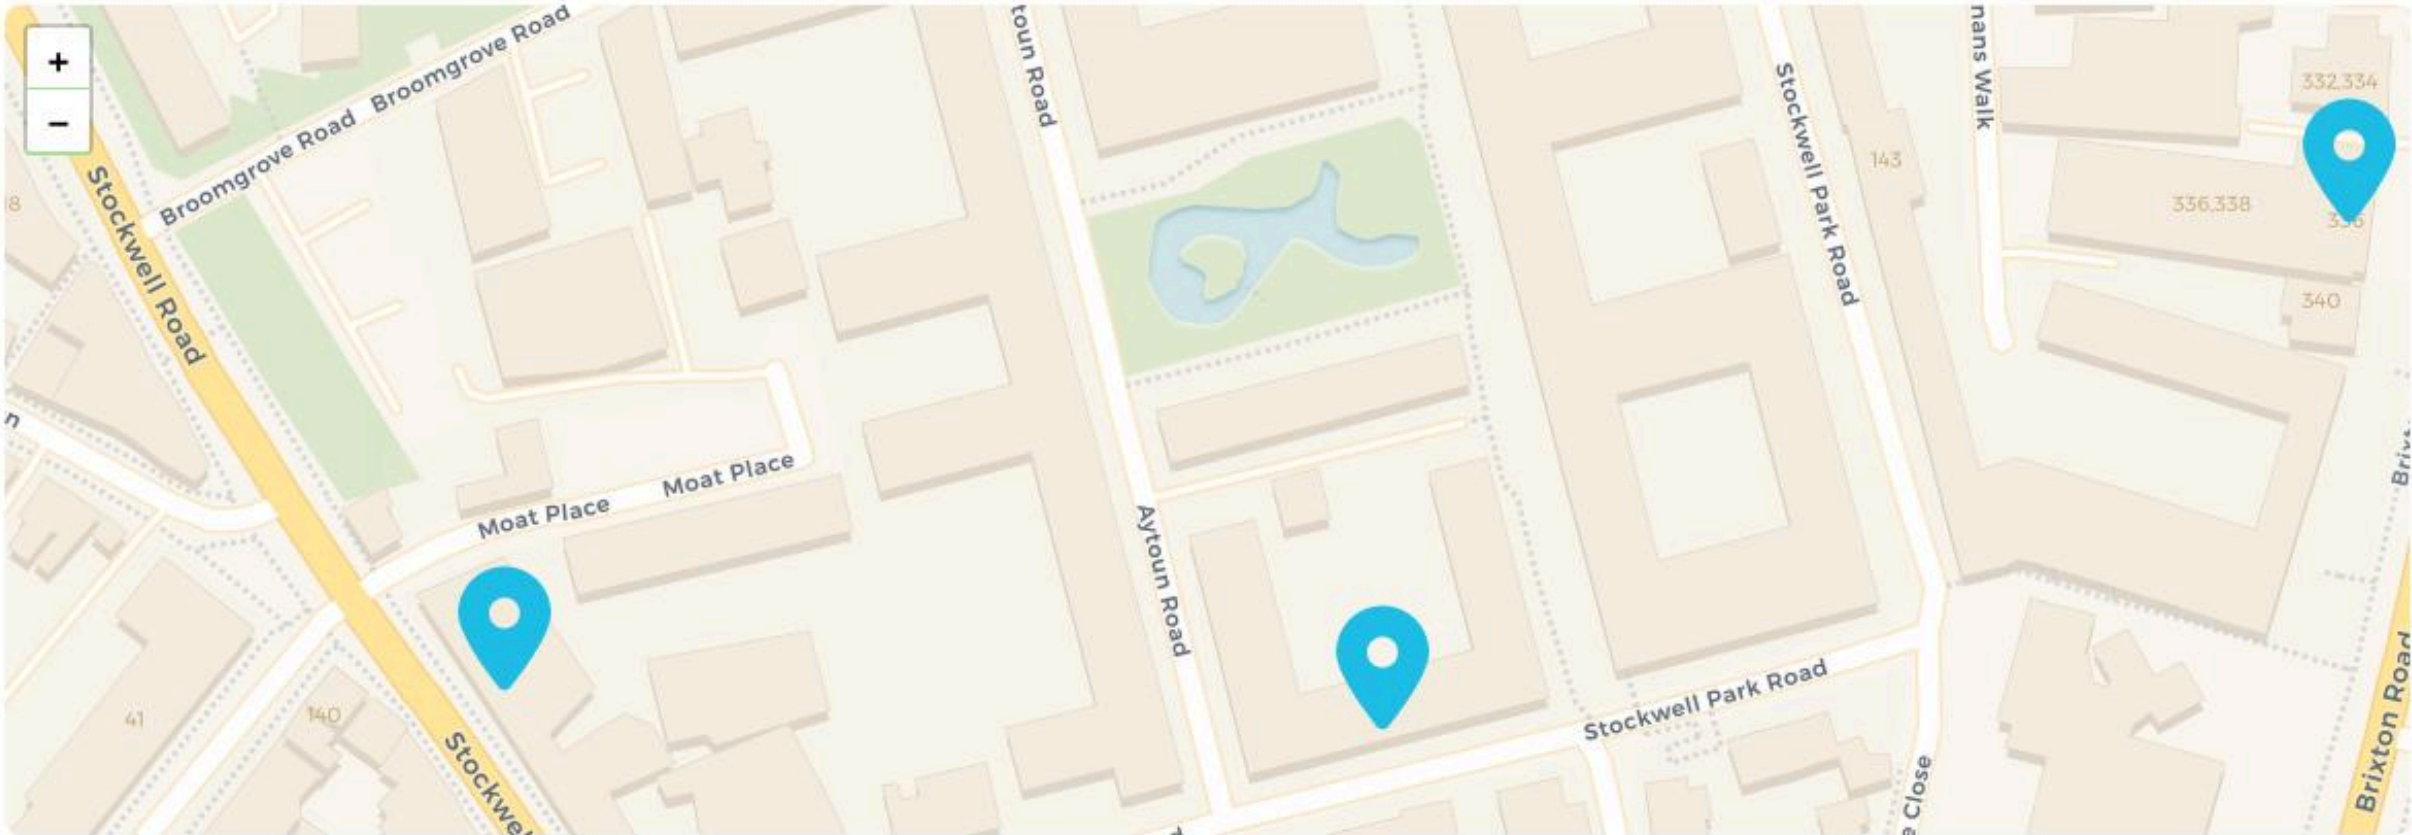

## Layout

The layout is housed in an admin panel and consists of the following features

- 1. Item counter
- 2. MapLibre component (optional)
- 3. Criteria match key (optional)
- 4. Action bar containing table customisation component
- 5. Advanced table
