

Standardised one platform menu

The one platform menu allows user to navigate to other product features within our ecosystem seamlessly, whilst better surfacing upsell of products/features the user doesn't have.

This standardised component will use menu items coming from an API and will be delivered to the user view two views – one on the one platform hub and one within the products.

One platform menu on the hub

The one platform Hub view uses the navbar dual component.

One platform menu within products

The product view of the one platform menu uses the navbar secondary with the inclusion of the branch selector component as a slot.
