

Advanced Table

Advanced tables are used to organise and display data efficiently where the need for a greater level of analysis is required vs standard tables. The Advanced version, in addition to the styling and functionality available in the basic and expanded table, allows for customisation of table structure with greater filtering and sorting capabilities.

The Advanced table's features are ideal for analysis, reporting and insights data where the user has greater requirements from the data shown in the table.

The Action bar component is usually coupled with the advance table to provide further capabilities such as actioning on selected row items, showing/hiding columns, re-ordering columns and pinning columns.

1. Action bar
2. Column header (unique to the advanced table)
3. Table row (row example contains checkbox and button components applied which are outlined in expanded table documentation, these are optional across all design system tables and more actions a can be added such as the overflow and kebab menu)
4. Horizontal scroll
5. Pagination

Table Dimensions

☐ 59 The South Gate Wood, NE68 3LS	27/06/26	£300,000	Heaton	13 weeks

Column header in detail

Column title header

The column title text is a smaller size to the standard table headers, set to the text sizing of 'Small', this is to allow for the additional column actions without adding unnecessary width to the column. In addition to this, the column title does not allow for wrapping, again, to ensure the additional column actions sit clearly in line with the text.

Sorting ability

The sorting uses an action button within the column header, to navigate through the various sorting options, the user simply clicks the action button to move to the next sorting state. The worded sorting states are by most recent, alphabetically A-Z, alphabetically Z-A. The numerical sorting states are by most recent, lowest-highest value, Highest-lowest value.

Filtering ability

The filtering uses an action button within the column header, with an popover dialog upon clicking the action button. The filtering gives the user a deeper level of filtering rules and the ability to add multiple filter conditions.

Filter types

Time frame

This filter can be used within the advance table columns which use dates, days, weeks or years items. The filter operator gives the options of 'Equals, Does not equal, Greater than, Great then or equal to, Less than, Less than or equal to, Between' housed in a select menu. The filter value uses the date picker as standard, however standard select field can be used depending on use case.

Numeric

This filter can be used within the advance table columns which use pricing or quantity items. The filter operator gives the options of 'Equals, Does not equal, Greater than, Great then or equal to, Less than, Less than or equal to, Between' housed in a select menu. The filter value can use standard select fields or the currency field depending on use case.

Entity

This filter can be used within the advance table columns which use property address, name, company or branch. The filter operator give the options of 'Contains, Does not contain, Equals, Does not equal, Begins with, End with' housed in a select menu. The filter value can use search, filter list or standard select fields depending on use case.

Boolean

This filter can be used within the advance table columns which use Yes/No or True/False items. The filter operator give the options of 'Contains, Does not contain, Equals, Does not equal' housed in a select menu. The filter value uses radio buttons or standard select depending on use case.

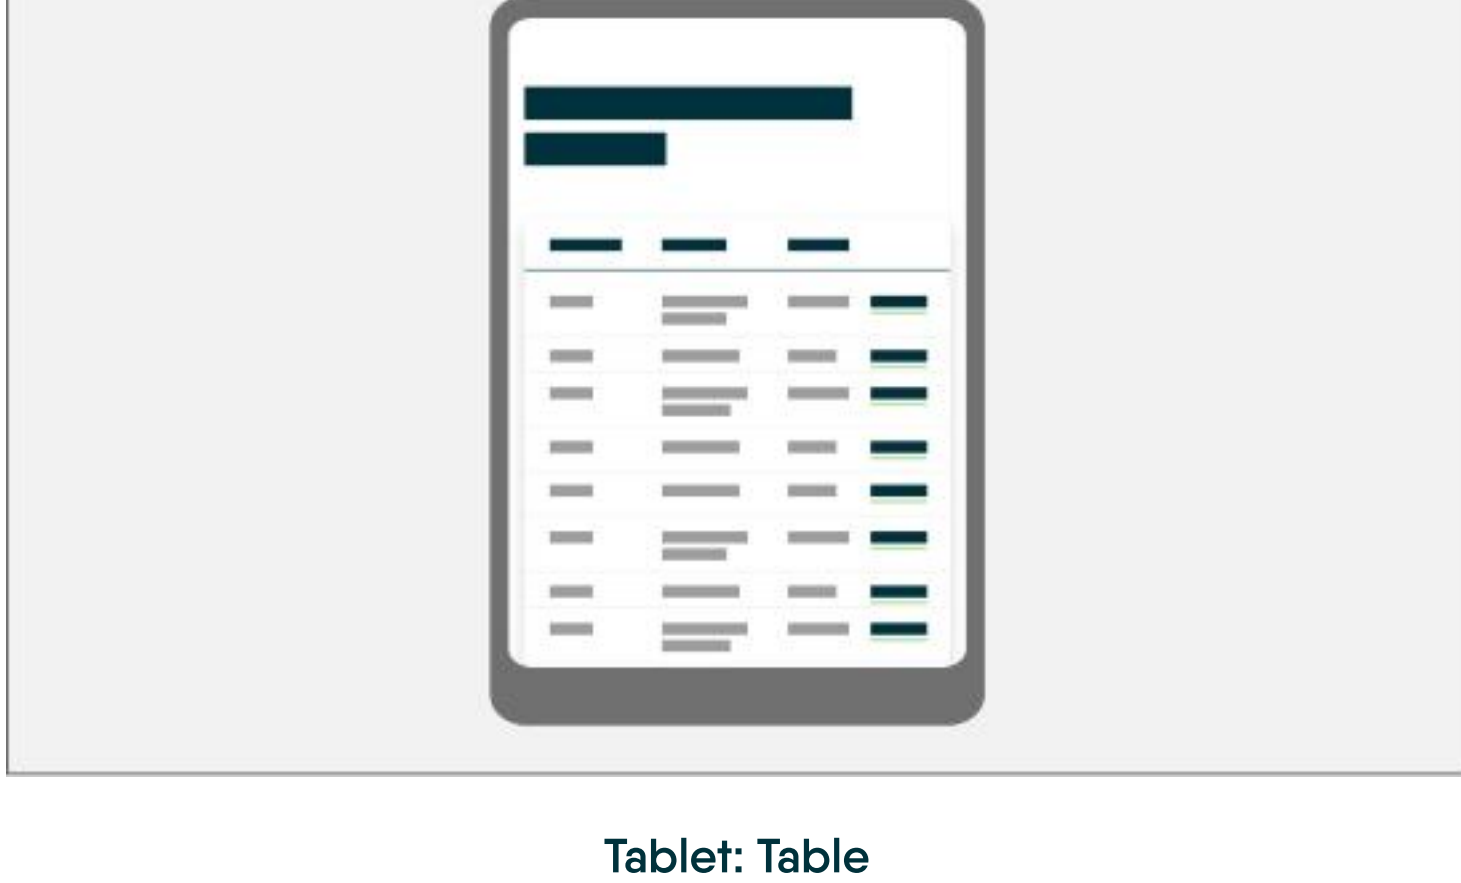

Formatting

Break point displays

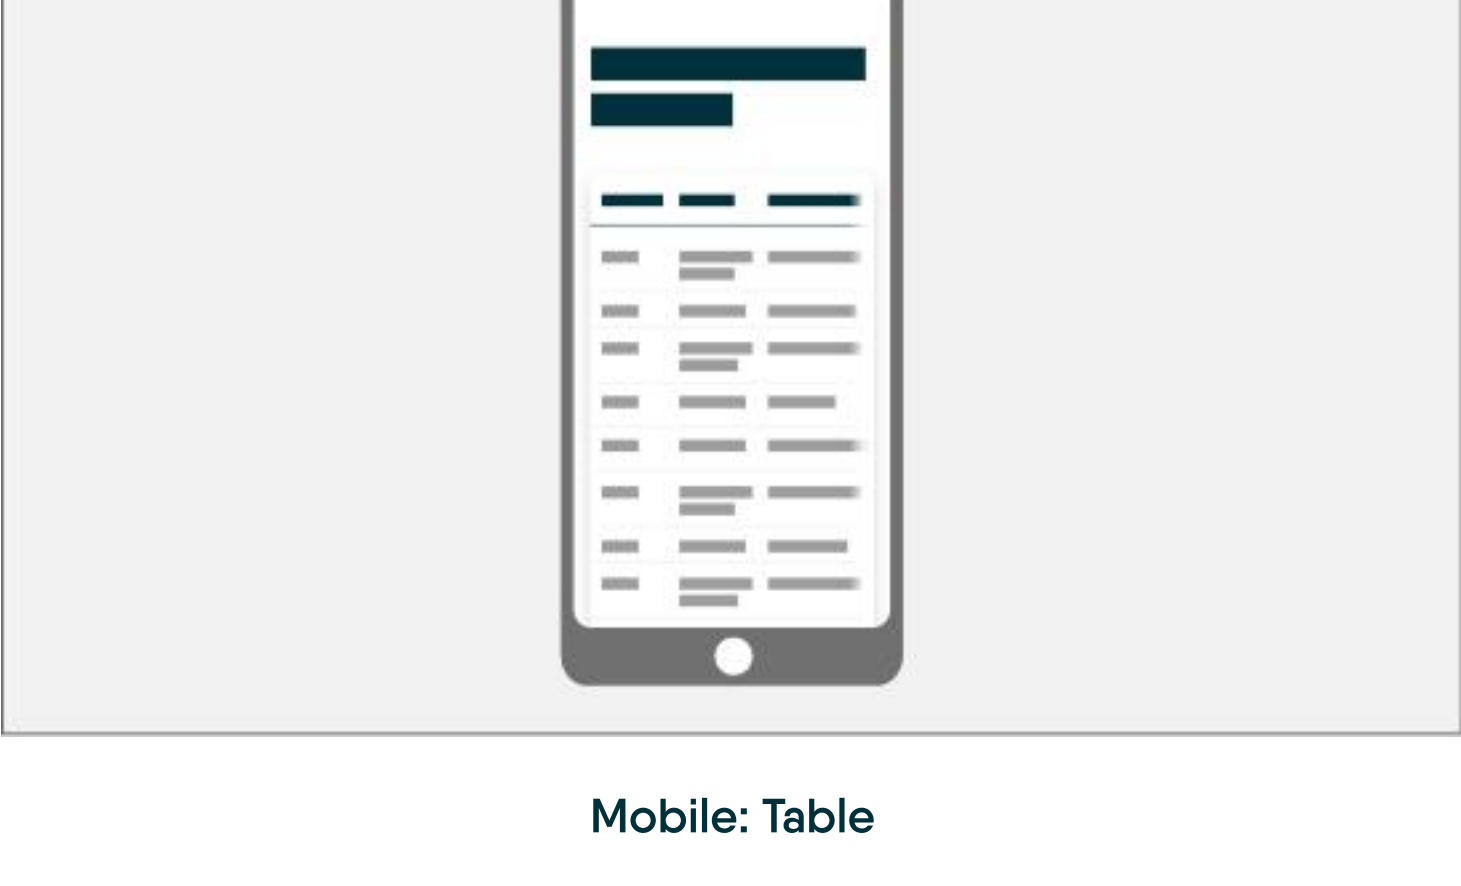

Across devices, the Advanced table on desktop, tablet and mobile share the same formatting and stylings.

Desktop: Table

Tablet: Table

Mobile: Table

Version control:

V1 added

Date of design update:

20.08.2026

Notable updates:

Advanced table has been created to give the user greater filtering capabilities.
