

Search

The search field is an element typically used in forms, tables to filter data.

Anatomy

Search uses an the existing input field (with suffix) with two optional features.

- 1. Input field (with suffix)
- 2. Browser default popover
- 3. Clear field button - compact quiet action button

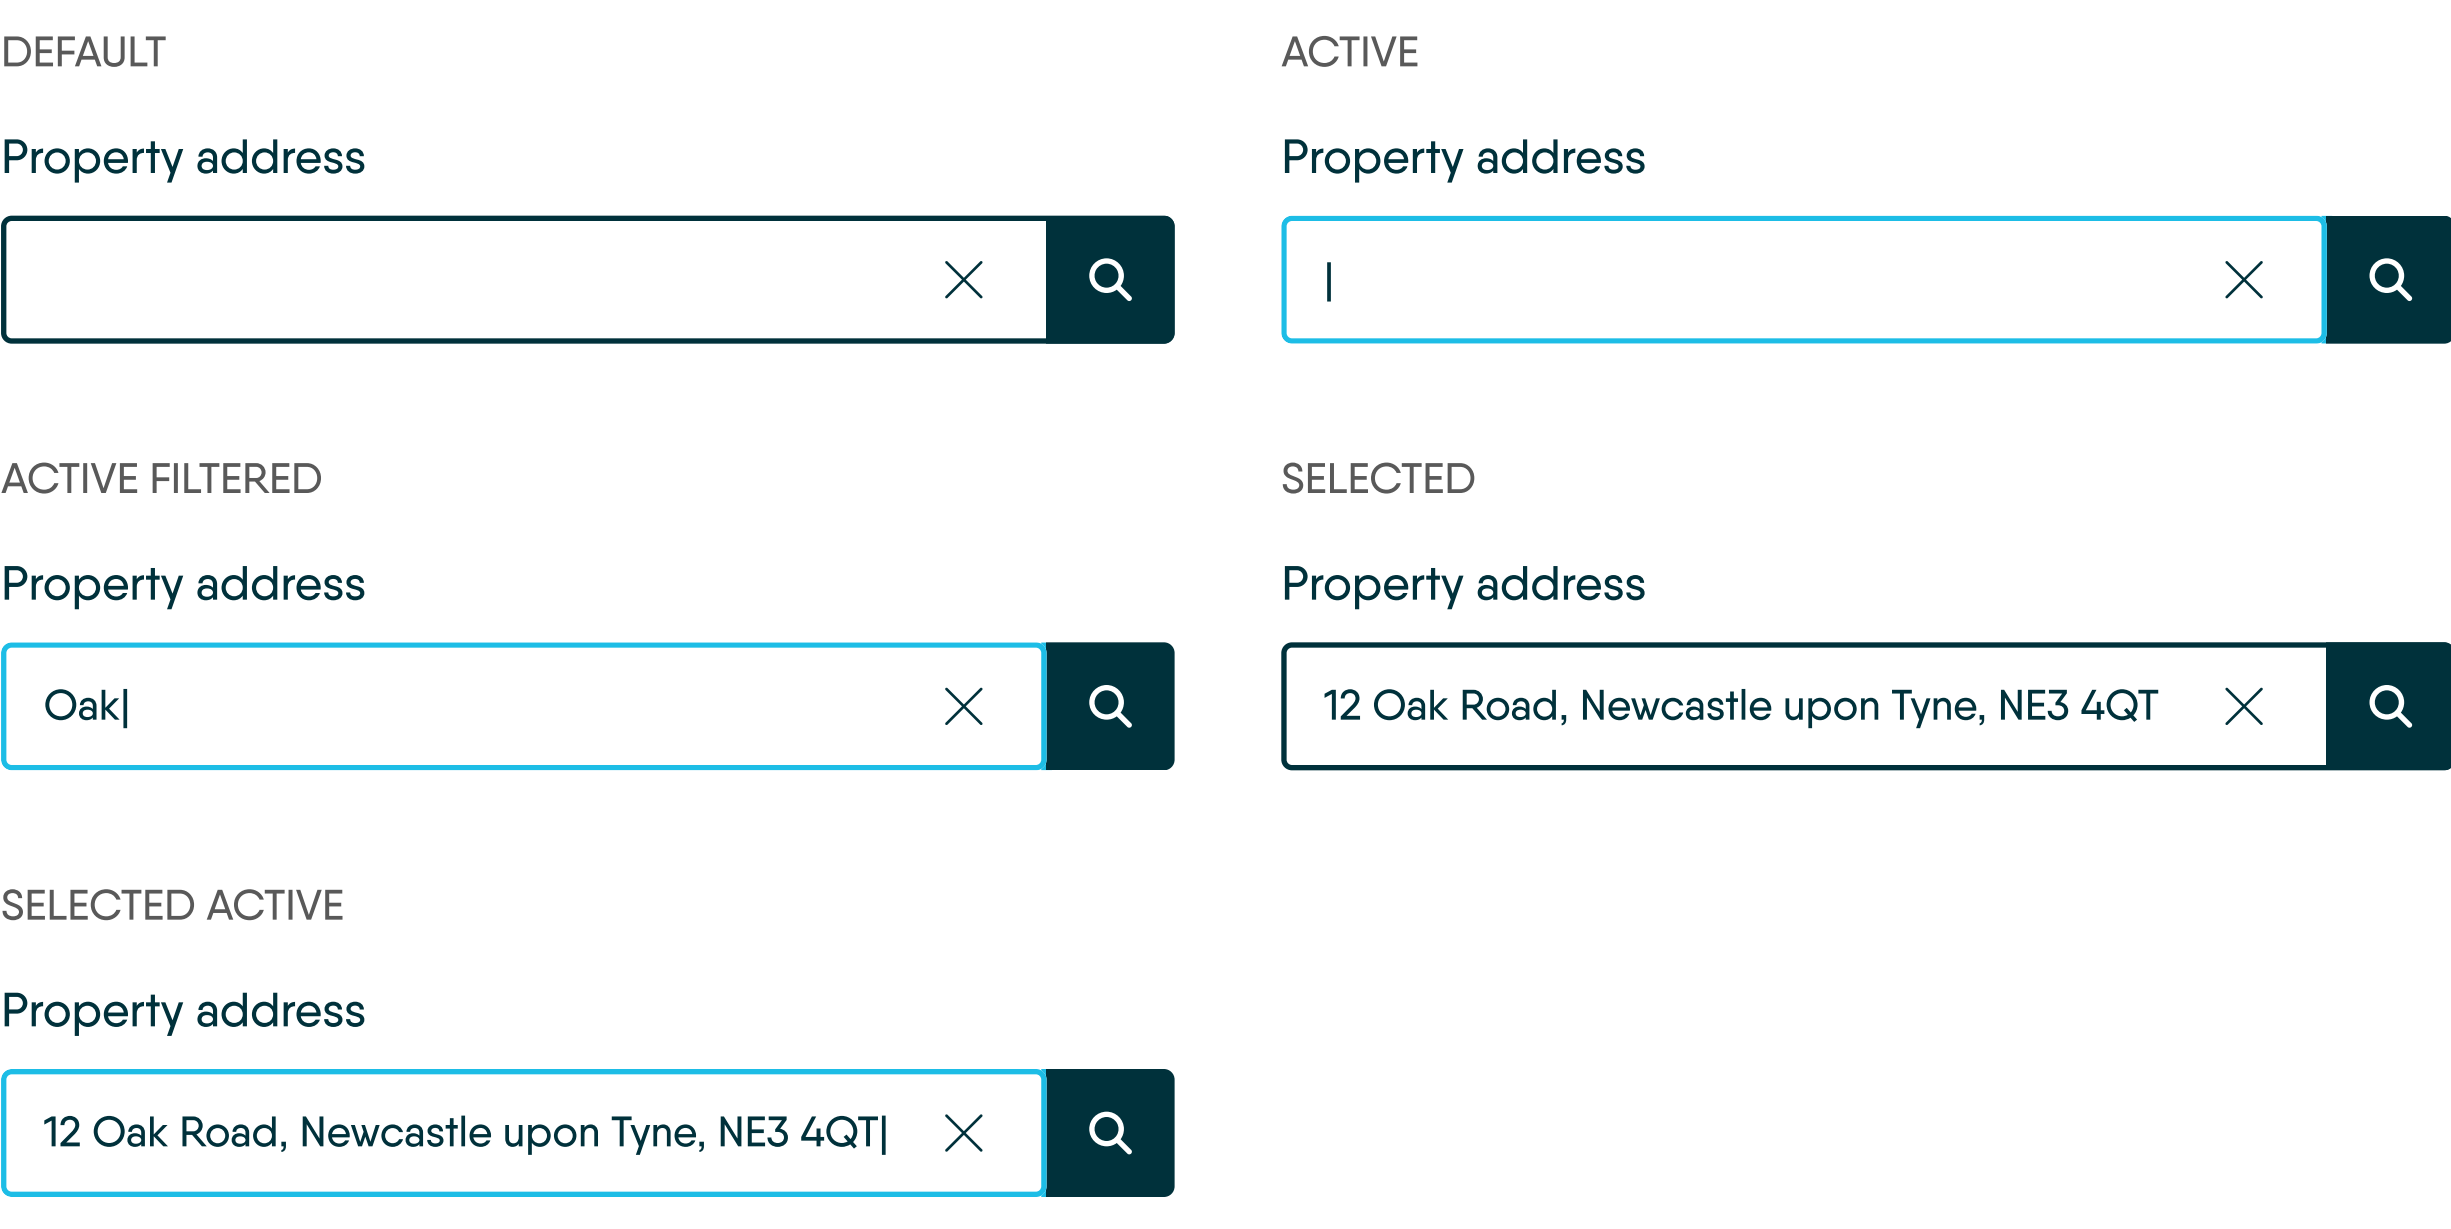

Behaviour

- **Automatically triggered:** typing automatically triggers the search and updates the results
- **After delay triggered:** after a certain amount of characters have been entered or after a specified amount of time
- The user should be able to clear the field via the clear field icon.
- Selecting an option should add that value to the field and close the dropdown.
- When the user re-opens the field once a value has been selected it should show all options with the current value shown as placeholder text and with that value highlighted in the dropdown as selected. Once the user starts typing the placeholder text should disappear.
- If the field is empty and an invalid value is typed and enter is pressed then the field should revert back to empty.
- If the field already has a value and the user tries to edit the value with a non-valid value then after press enter, the chevron, or clicks away from the field, the value should return to the last valid value.

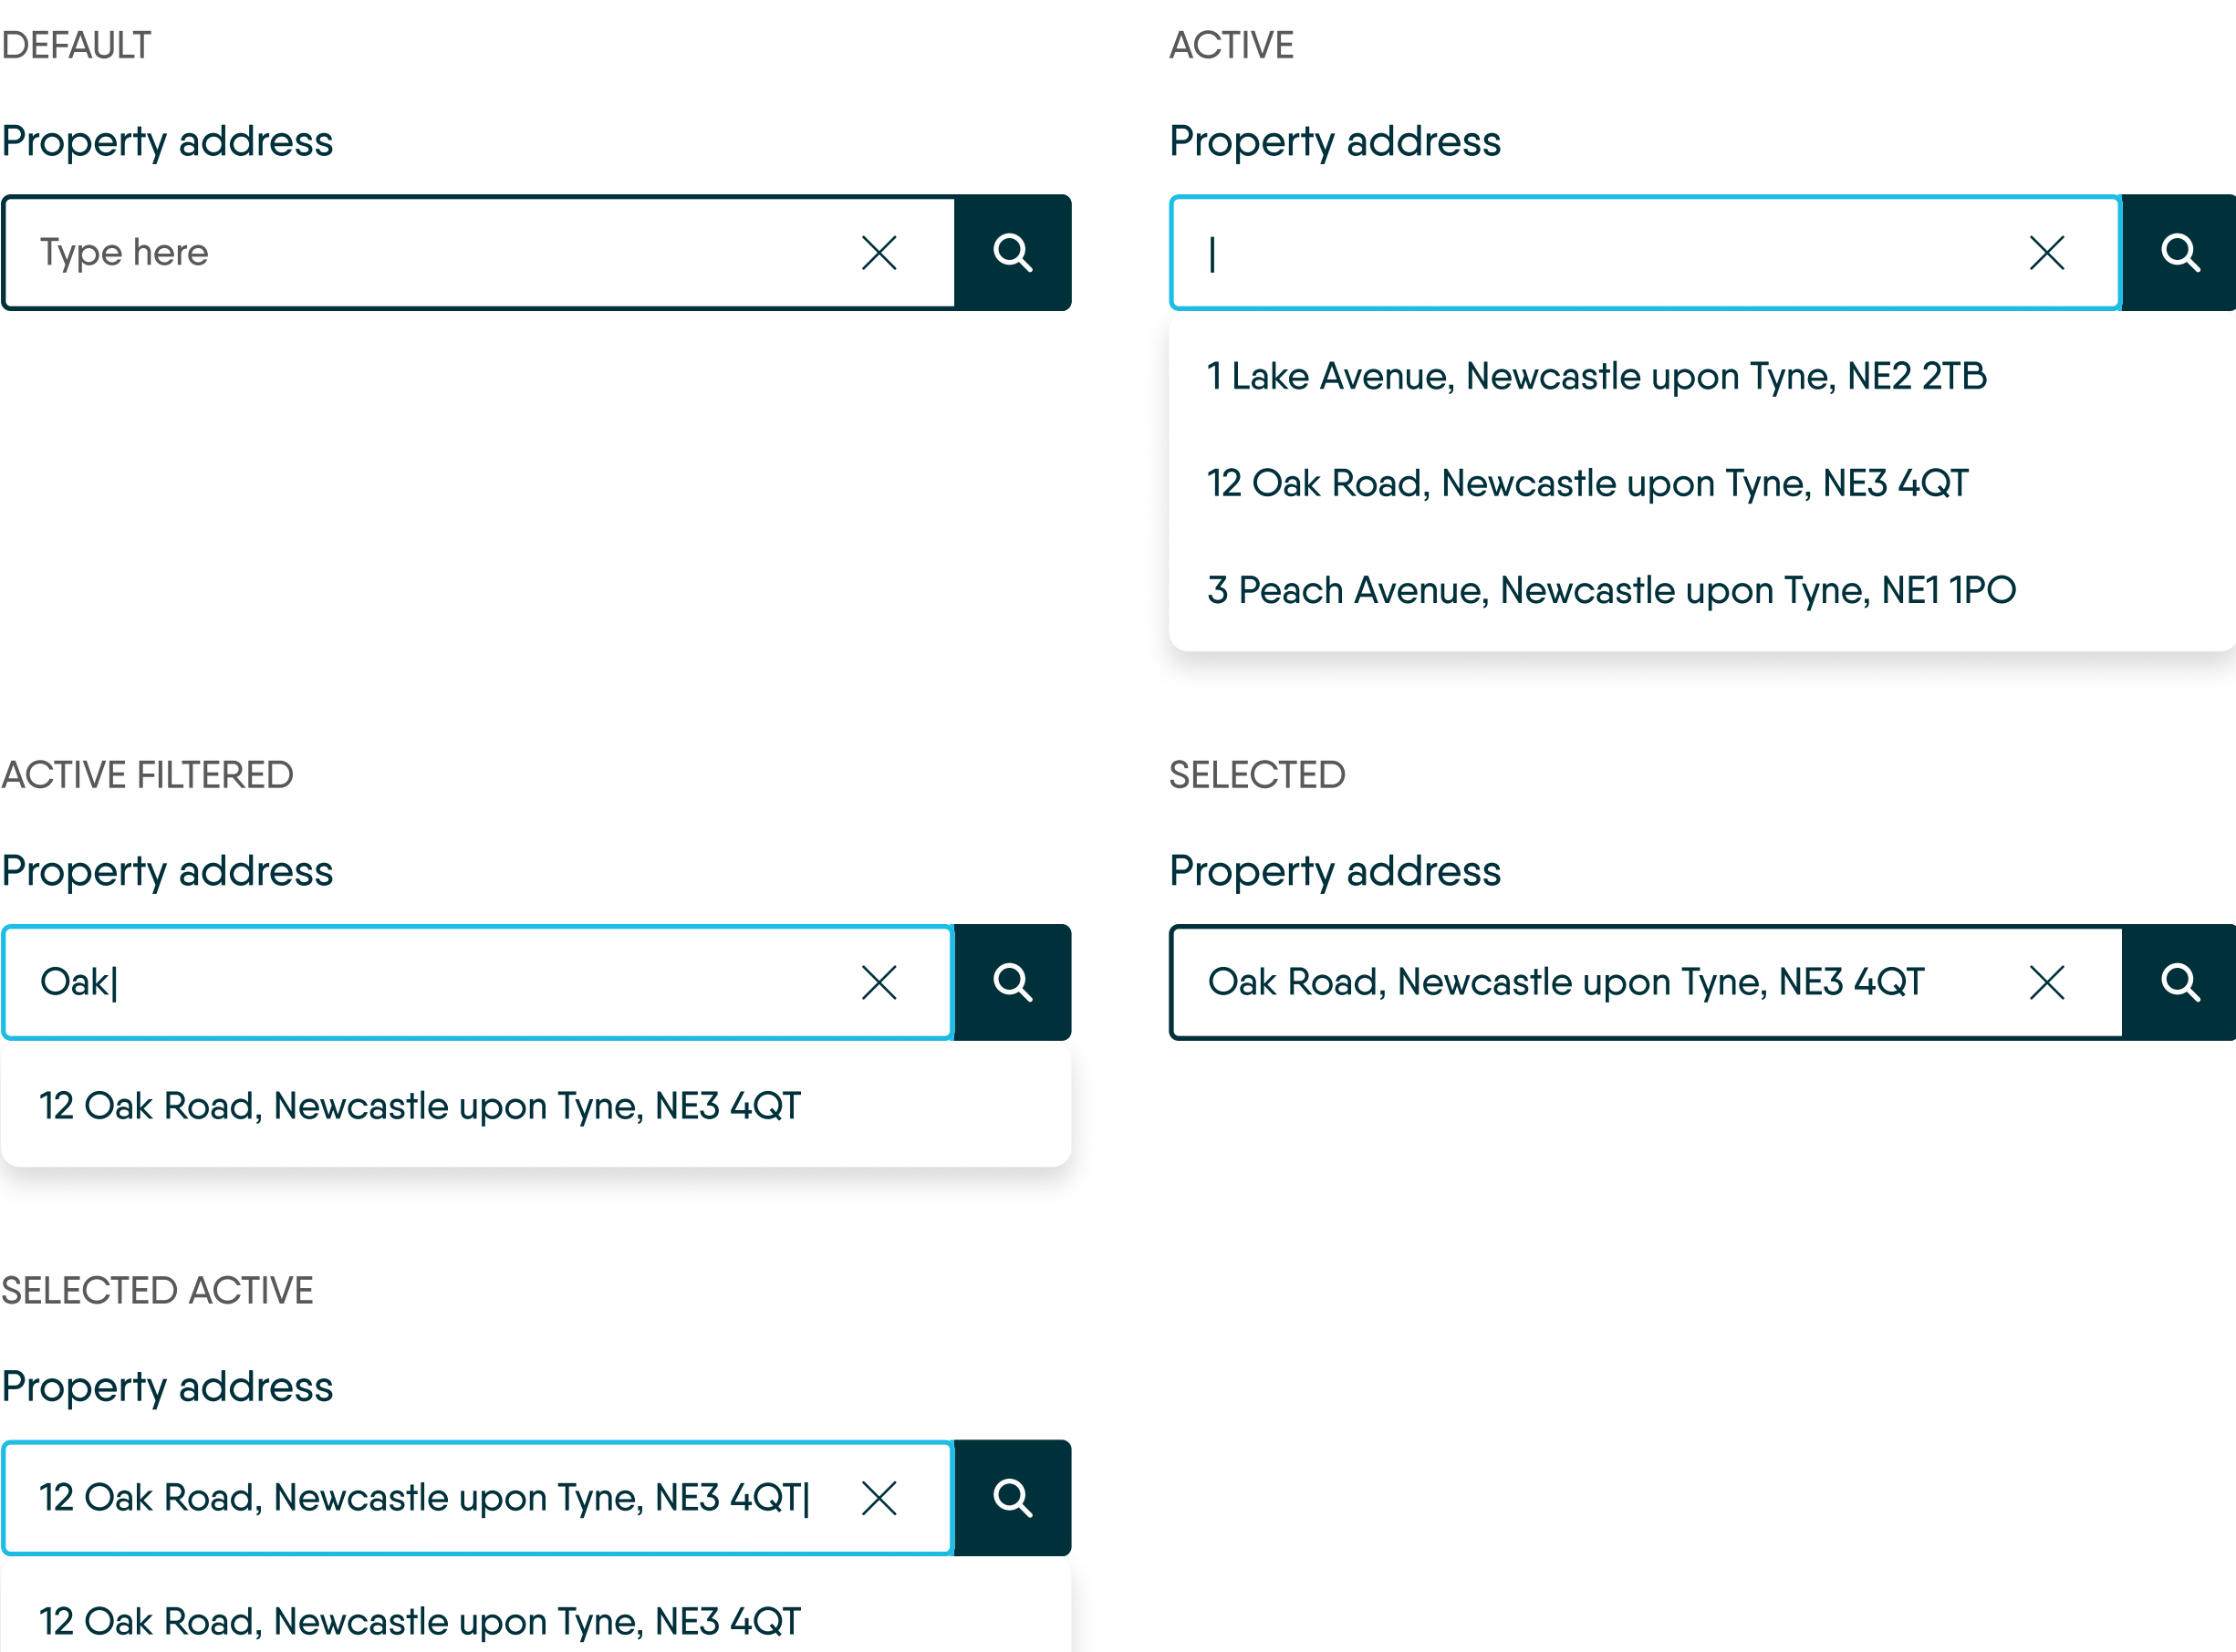

There is an optional feature of searches to include a browser default popover that presents any valid or suggested values that the user can click to fill the search field.

States

Default

With optional popover

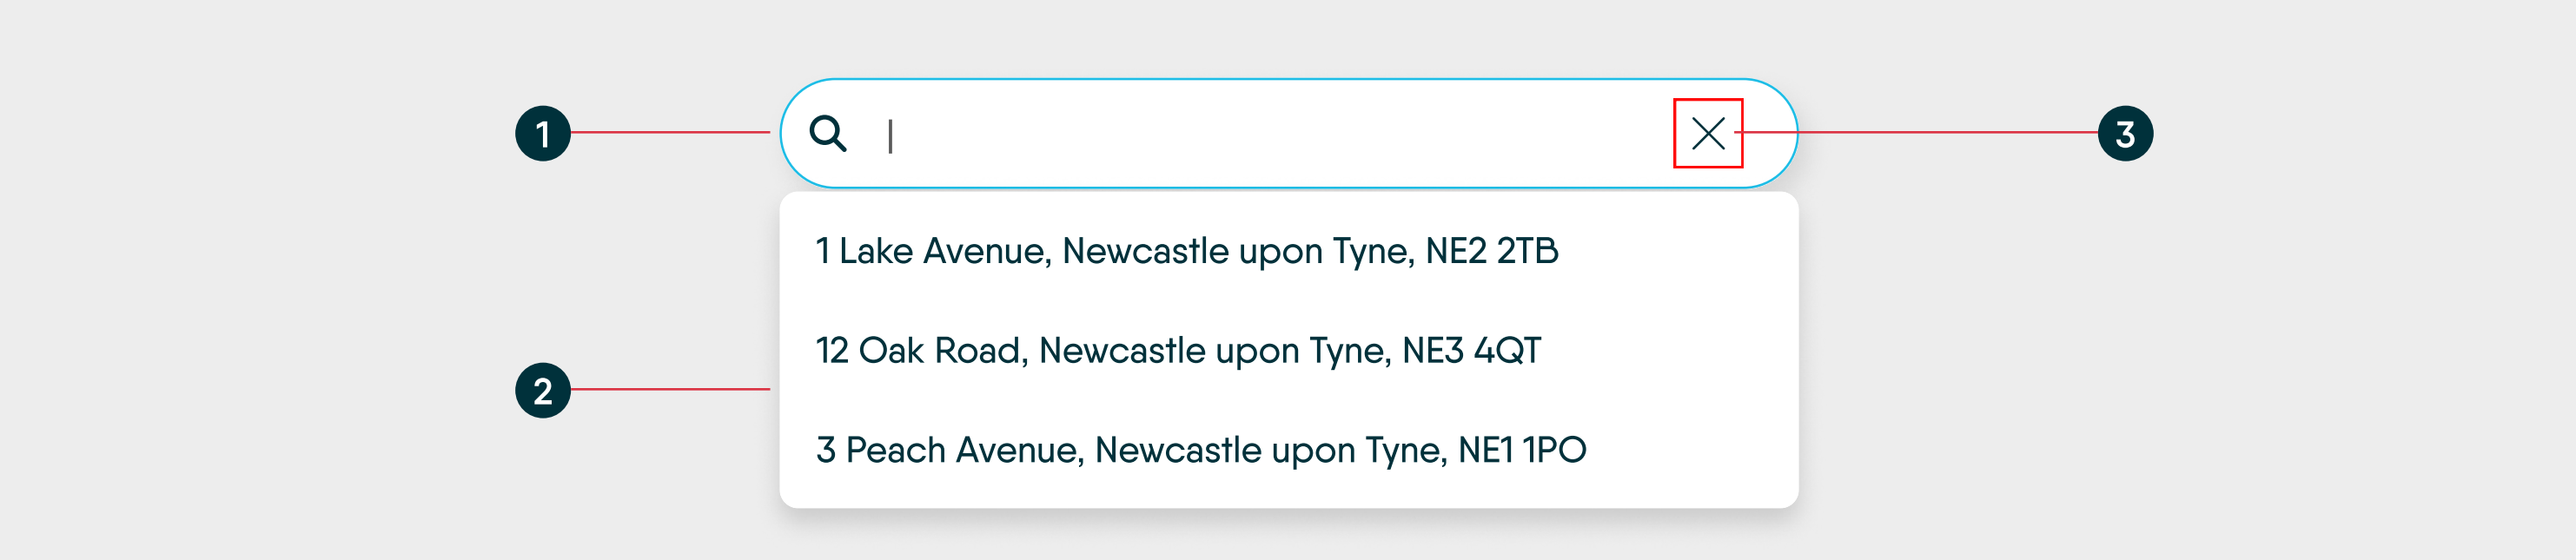

Stylised search

The stylised search field is an element typically used in admin panels, navigation menus and as a standalone field within a page.

Anatomy

Stylised search uses the same behaviours as the standard search but is styled in a more visually appealing way. The stylised search also comes with the option to include a drop shadow into the field.

- 1. Input field (with optional drop shadow)
- 2. Browser default popover
- 3. Clear field button - compact quiet action button

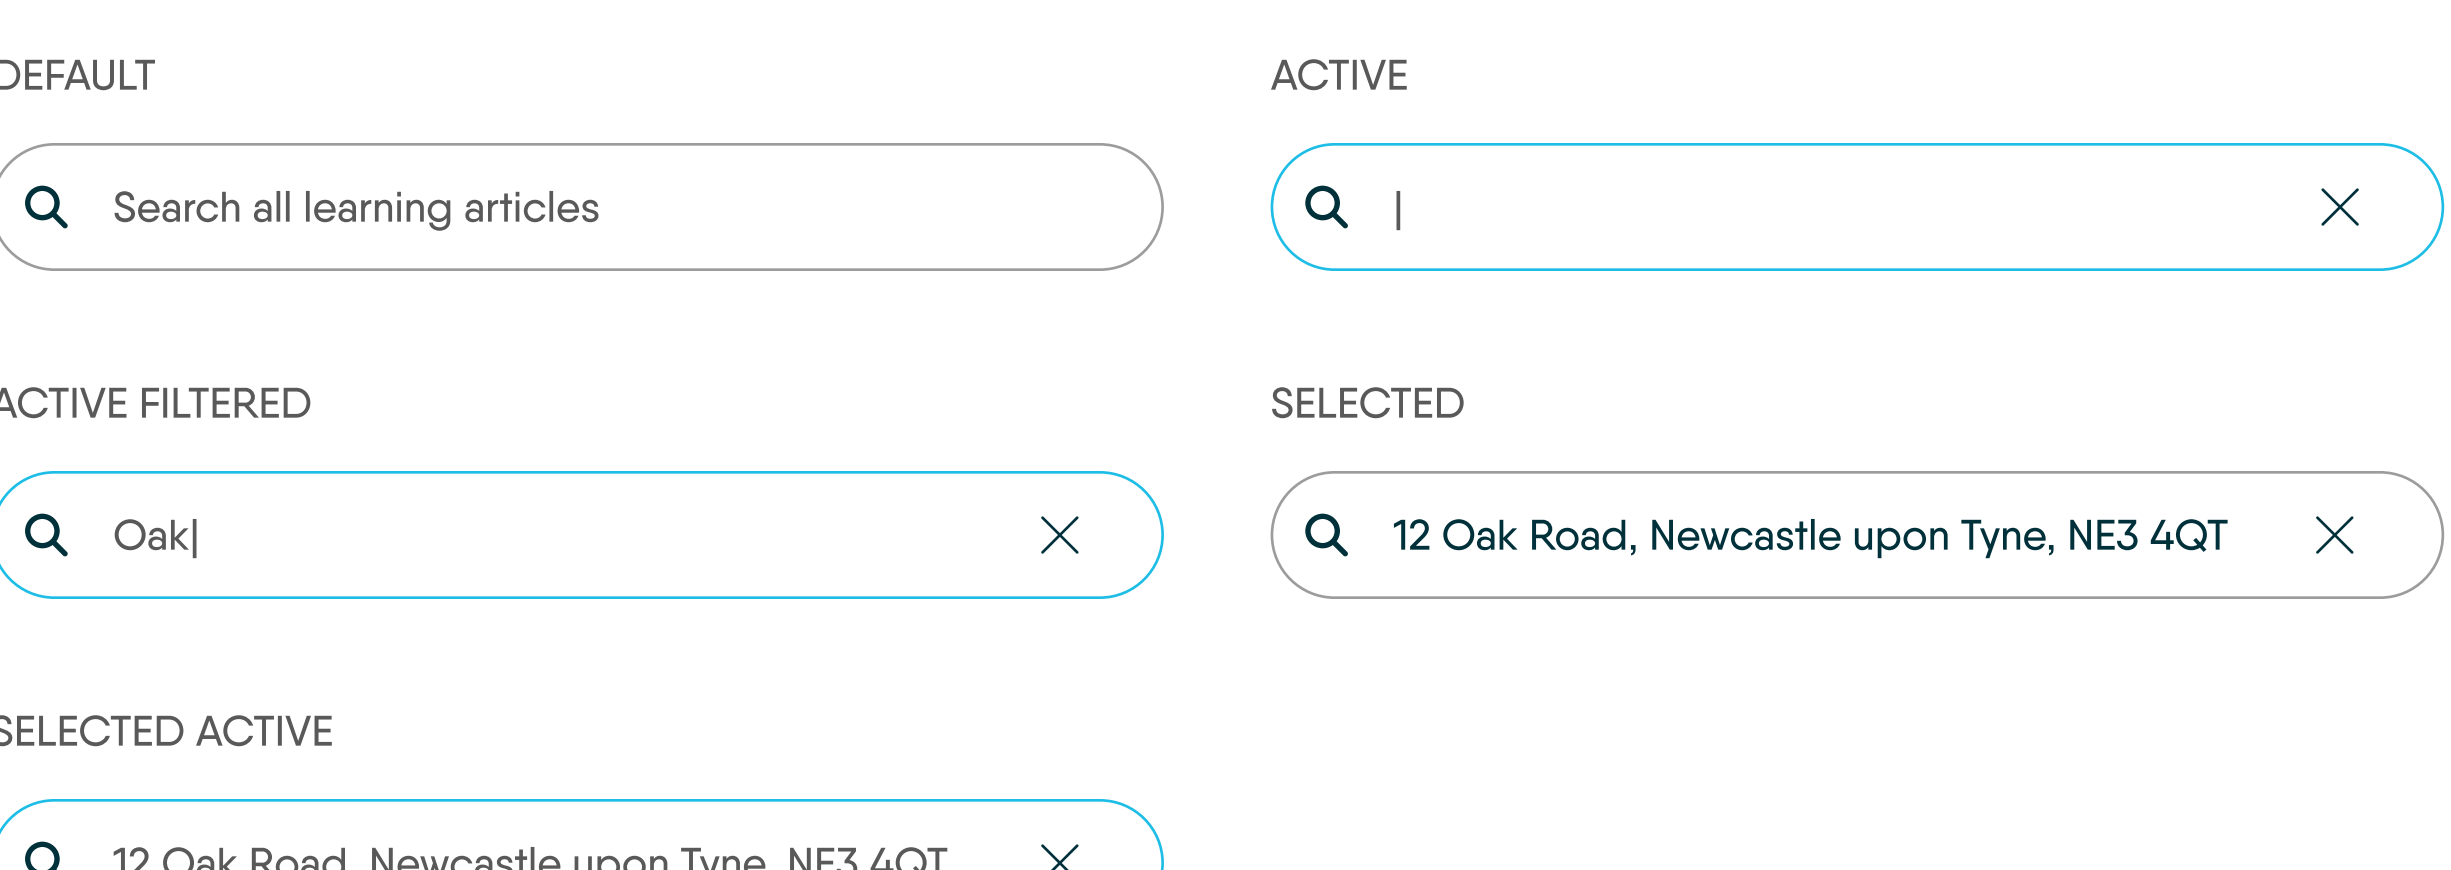

Sizes

The field is available in three different sizes:

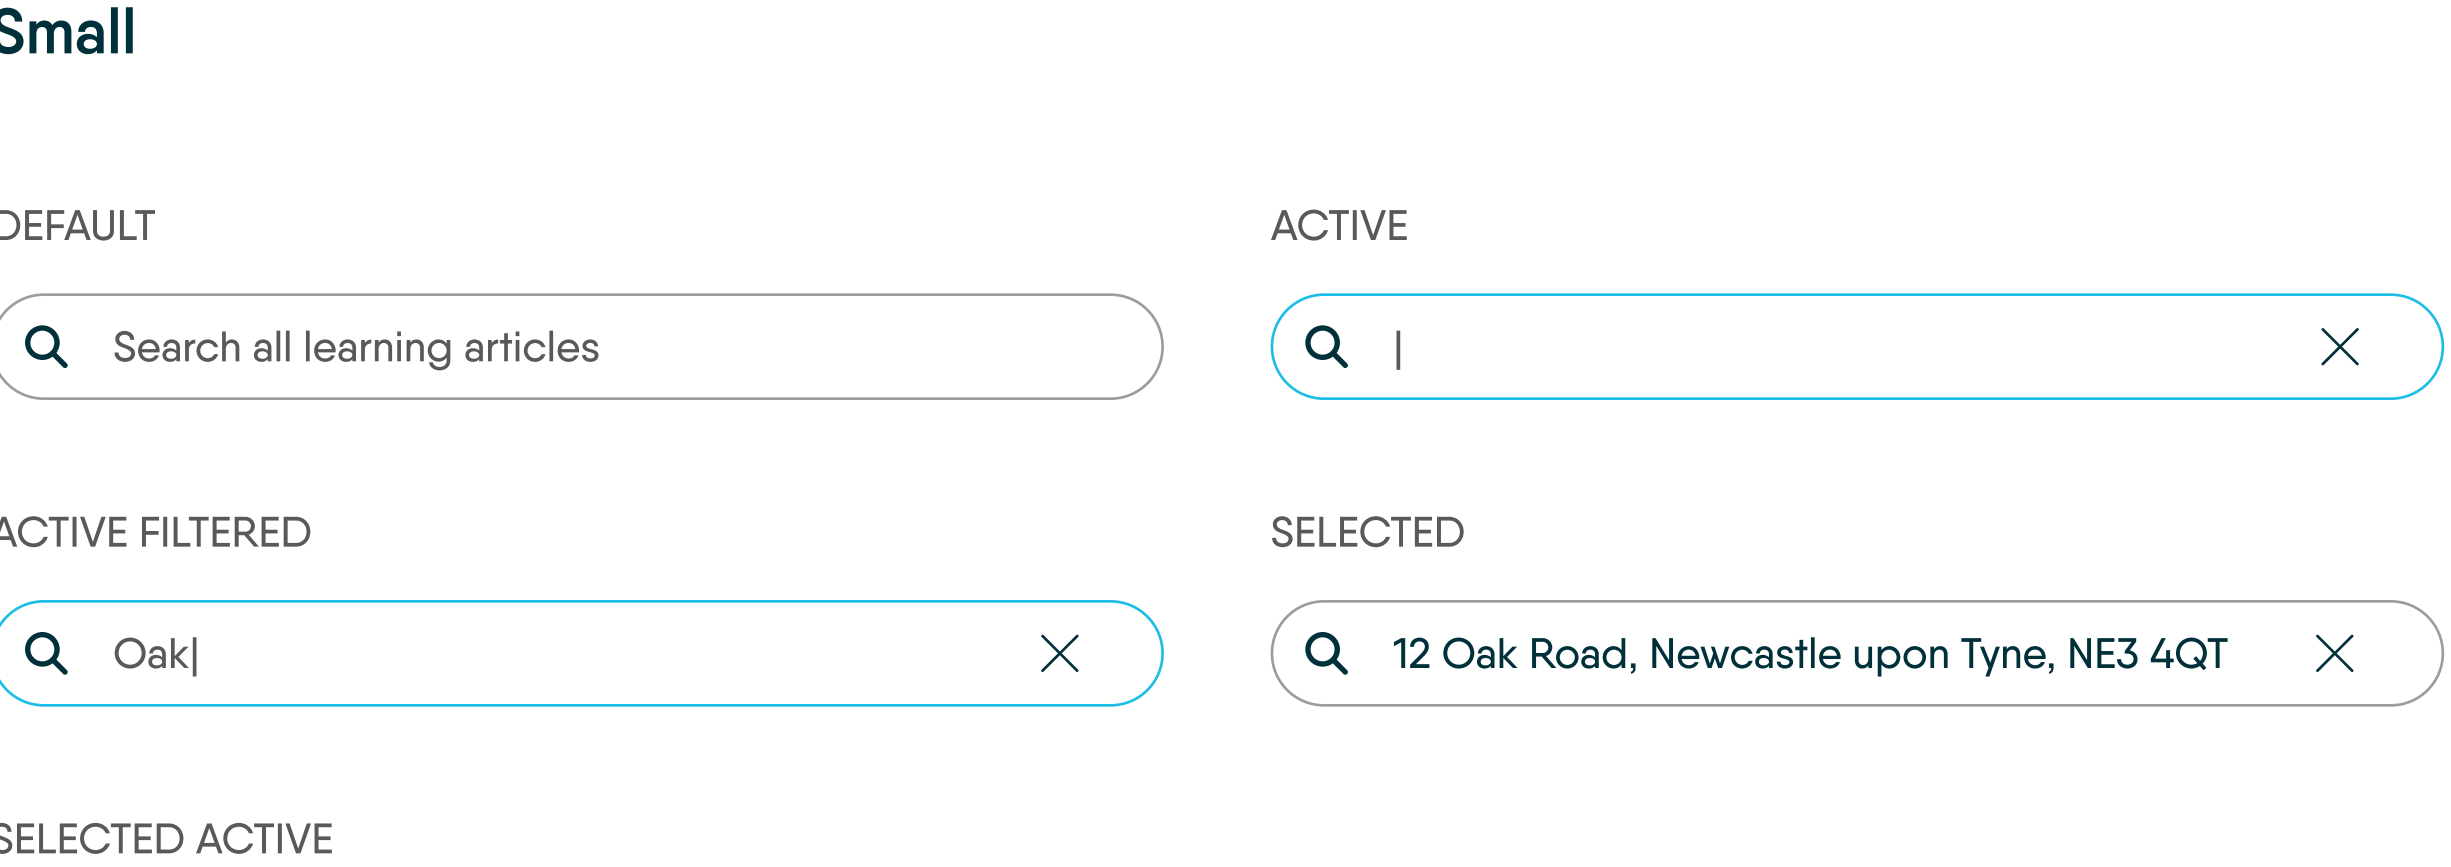

- **Default:** this has the field height of 48px (3rem)
- **Small:** this has the field height of 40px (2.5rem)
- **Compact:** this follows the same height and sizing of the compact buttons with the ability to show the full field upon pressed.

States

Default

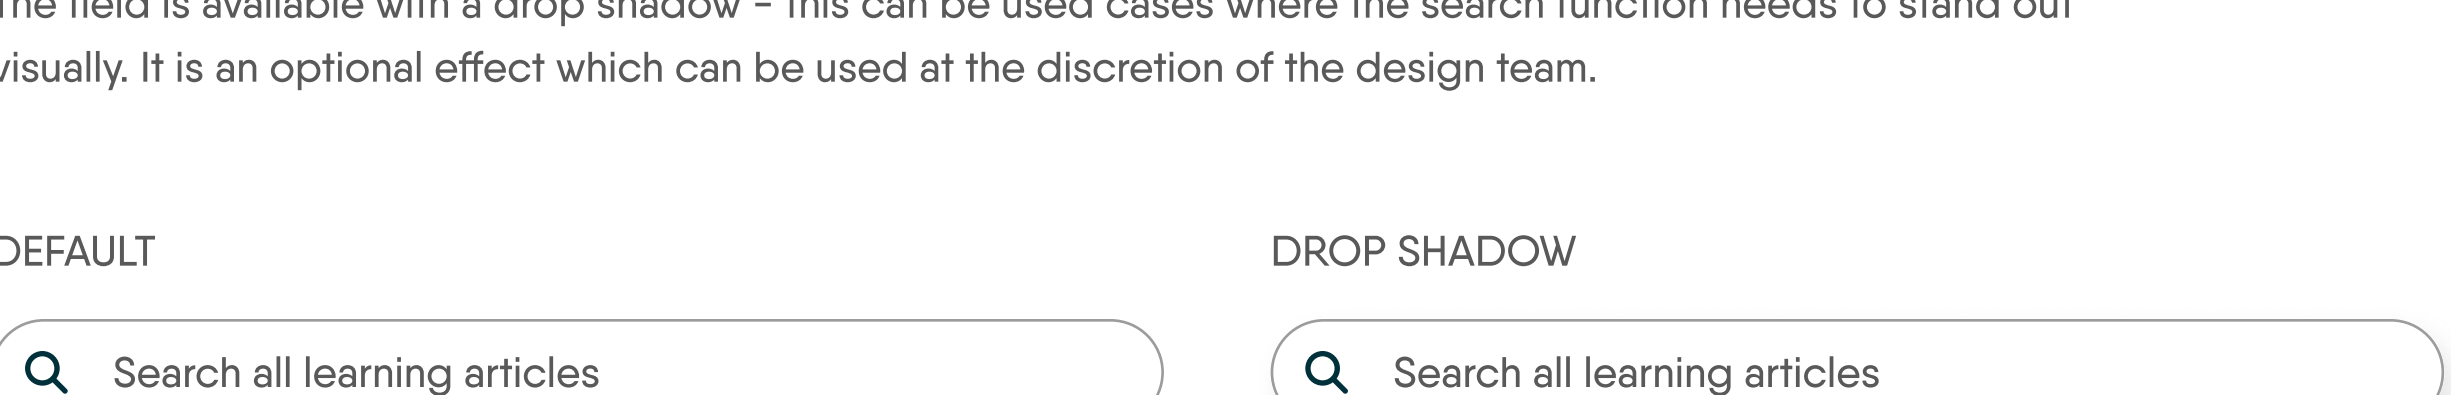

Small

Variants

The field is available with a drop shadow - this can be used cases where the search function needs to stand out visually. It is an optional effect which can be used at the discretion of the design team.

Version control:	Date of design update:	Notable updates:
V2 added	16.04.2026	Inclusion of stylised search field -giving an option for displaying search in none data entry settings
V1 added	21.05.2025	N/A
